In the 1960s, a small group of radical thinkers upset the rigid foundation of modern scientific thinking by placing new importance on the tiny experimental irregularities that scientists had long learned to ignore. Miniscule differences in data, they said, would eventually produce massive ones—and complex systems like the weather, economics, and human behavior suddenly became clearer and more beautiful than they had ever been before. In this updated version of his seminal work, James Gleick lays out that new vision of a chaotic universe. Interviews with leading theoreticians, a video introduction from the author, and motion graphics depicting concepts such as the famous Lorenz attractor—the concept that birthed chaos theory—complement Gleick's

elegant prose. Never before has chaos been so easy to grasp. "Beautifully lucid . . . Gleick has a novelist's touch for describing his scientists and their settings, an eye for the apt analogy, and a sense of the dramatic and the poetic."—*San Francisco Chronicle* "There is a teleological grandeur about this new math that gives the imagination wings."—*Vogue* "Gleick's *Chaos* is not only enthralling and precise, but full of beautifully strange and strangely beautiful ideas."—Douglas Hofstadter, author of *Gödel, Escher, Bach* Born in New York City in 1954, James Gleick is one of the nation's preeminent science writers. Upon graduating from Harvard in 1976, he founded *Metropolis*, a weekly Minneapolis newspaper, and spent the next decade working at the *New York Times*. Gleick's prominent works include *Genius: The Life and Science of Richard Feynman*, *Isaac Newton*, and *Chaos: Making a New Science*, all of which were shortlisted for the Pulitzer Prize. His latest book, *The Information: A History, a Theory, a Flood*, was published in March 2011. He lives and works in New York.
